

# How to purchase ICO Token

# Preparations

- 1) Coins (Bitcoin / Ethereum)
  - Please refer to the ICO website for which coins and how much is the ICO token
- 2) Ethereum Wallet
  - For holding ICO token
  - Cloud wallet, Web wallet, Chrome Extension, Desktop wallet (Chrome Extension is recommended)
  - Important : Some ETH (~ 0.001) is needed to transfer the token to others
- 4) email address
  - For contact when something is wrong
- 5) Payment address and Token contract address
  - Please refer to the ICO website for the addresses

# Ethereum Wallet

- NOT a normal ETH account
  - Normally does not support ICO tokens
  - Exchange wallets only support the coins listed on exchange
- Cloud wallet
  - e.g. <https://eidoo.io/> <https://citowise.com/> (So far only these two)
  - Convenience ( mobile app + web panel )
  - Support most listed or unlisted ICO
  - Does not support hardware wallet
  - Private key is kept inside the device

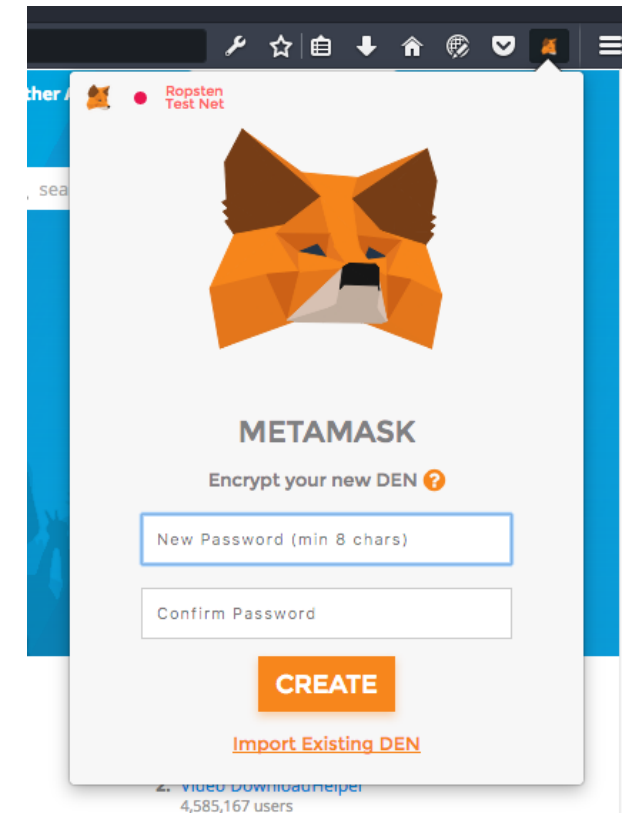

# Ethereum Wallet

- Web wallet
  - Visit a website to do all wallet operations
  - <https://www.myetherwallet.com/>
  - No need to install anything on PC
  - Support hardware wallet
  - Need to keep private key yourself
- MetaMask (chrome extension)
  - Least transaction fee and fastest transaction
  - Support hardware wallet
  - Private key is kept in PC by default
  - Wallet at risk if you visit malicious website

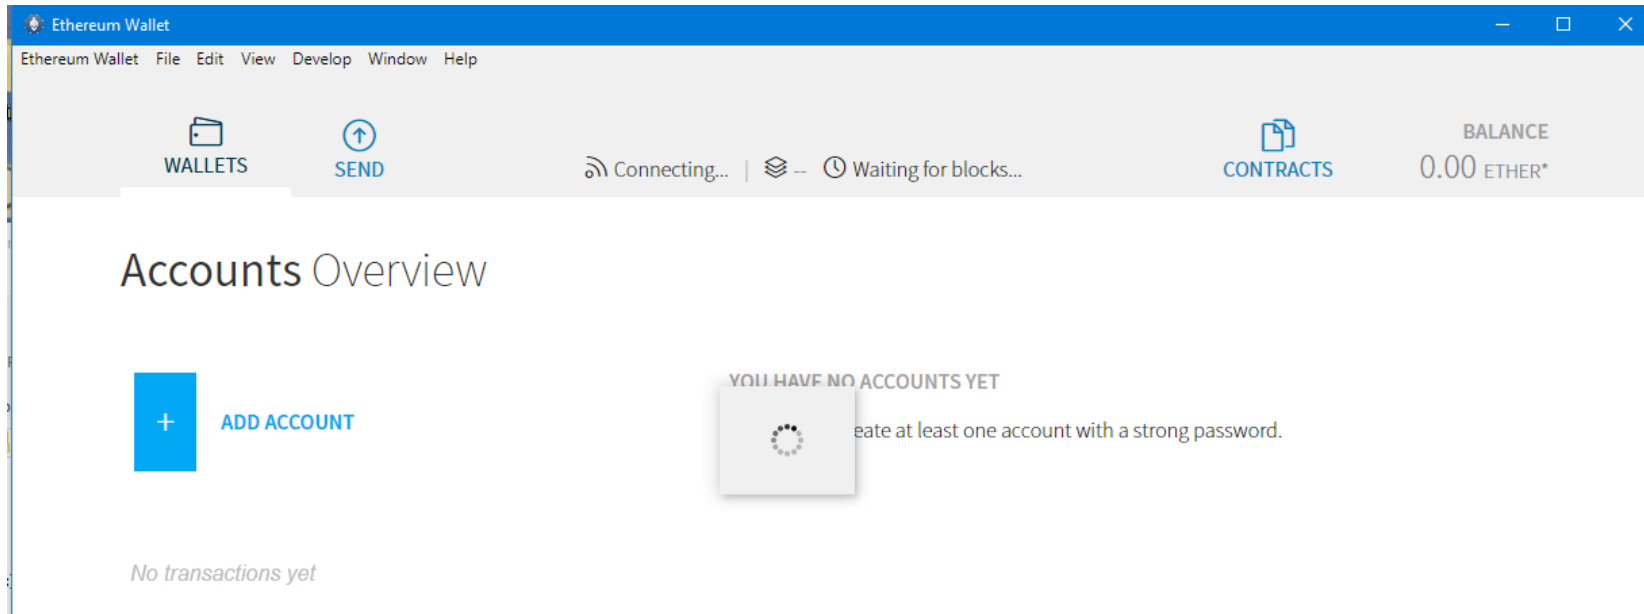

MyEtherWallet

# Ethereum Wallet

- Desktop wallet (Official Ethereum wallet)
  - <https://github.com/ethereum/mist/releases/>
  - Support all ERC-20 ICO token (no matter it is listed on exchange or not)
  - Most secure (it works as long as Ethereum exists)
  - Support hardware wallet
  - Higher transaction fee and likely slower transaction
    - (depends on peers connected)
  - Private key is kept in the PC by default

# Private Key and Hardware Wallet

- Your Ethereum wallet depends on a private key
- Have private key → Full control to your wallet
- Lose private key → Lost your wallet completely
- Normally, private key is kept in an encrypted keystore file
  - (no well known file extension)
- Hardware wallet (Trezor / Ledger Nano S)
  - A special encrypted USB to keep private keys
  - Need a wallet (web / MetaMask / desktop wallet) to do transactions

# Security best practice (if keeping for long time)

- Backup the keystore or private key into hardware wallet or encrypted USB and keep it in a secure place (e.g. home safe)
  - Use a strong password to protect it
- Print your private key / 12 words recovery phrases on a paper and store it inside another secret secure place (e.g. bank vault)
- Remove your wallet, and any trace of private key / wallet on PC completely
- Import your key to a newly created wallet when you need, and remove wallet afterwards

# Payment address and Token contract address

- Payment address

- The address you send the coins to
- Can be in text or in QR code
- Different coins should have different addresses but not necessary
- e.g. `0x80d8E8477708166E89A4DbF3A5Bec9ADce3703F6`

- Token contract address

- Address for your Ethereum Wallet to access the ICO token
- Same format as payment address
- In text
- e.g. `0x6e403df62b5e5d2991519fee1768291b1bfeeb8b`

Feel free to send  
me ETH 😊

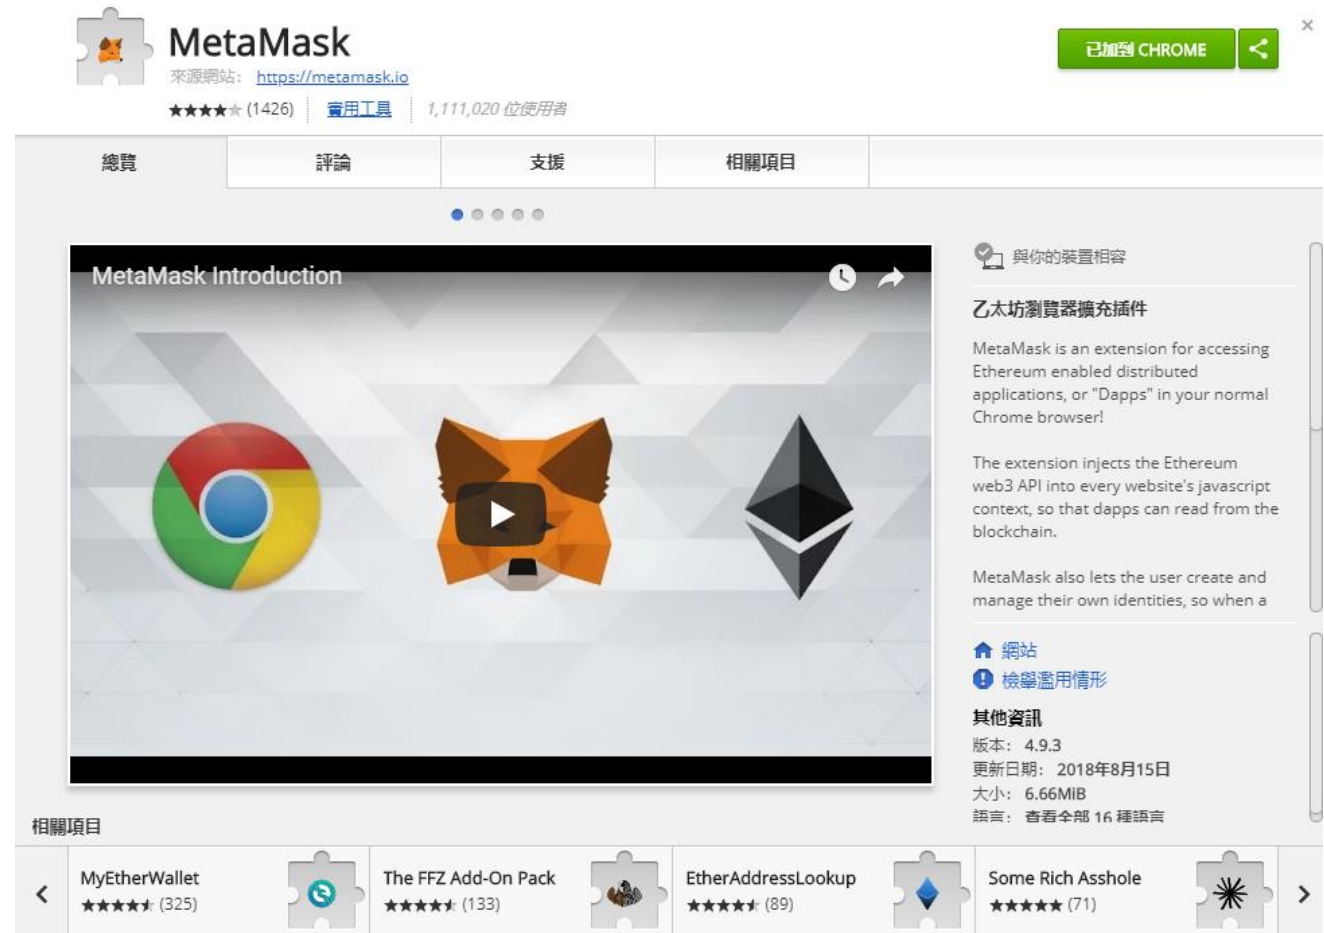

# Purchase Steps

- 1) Create an address in your wallet to receive the ICO token
  - 2) Transfer the money to specified address and get a transaction ID
  - 3) Register payment information and address on ICO website
  - 4) Wait for around 1 day, token will be sent to your wallet
- 
- Note : you may use the same address for different ICO
  - In the following, the process will be demo MetaMask by paying in ETH

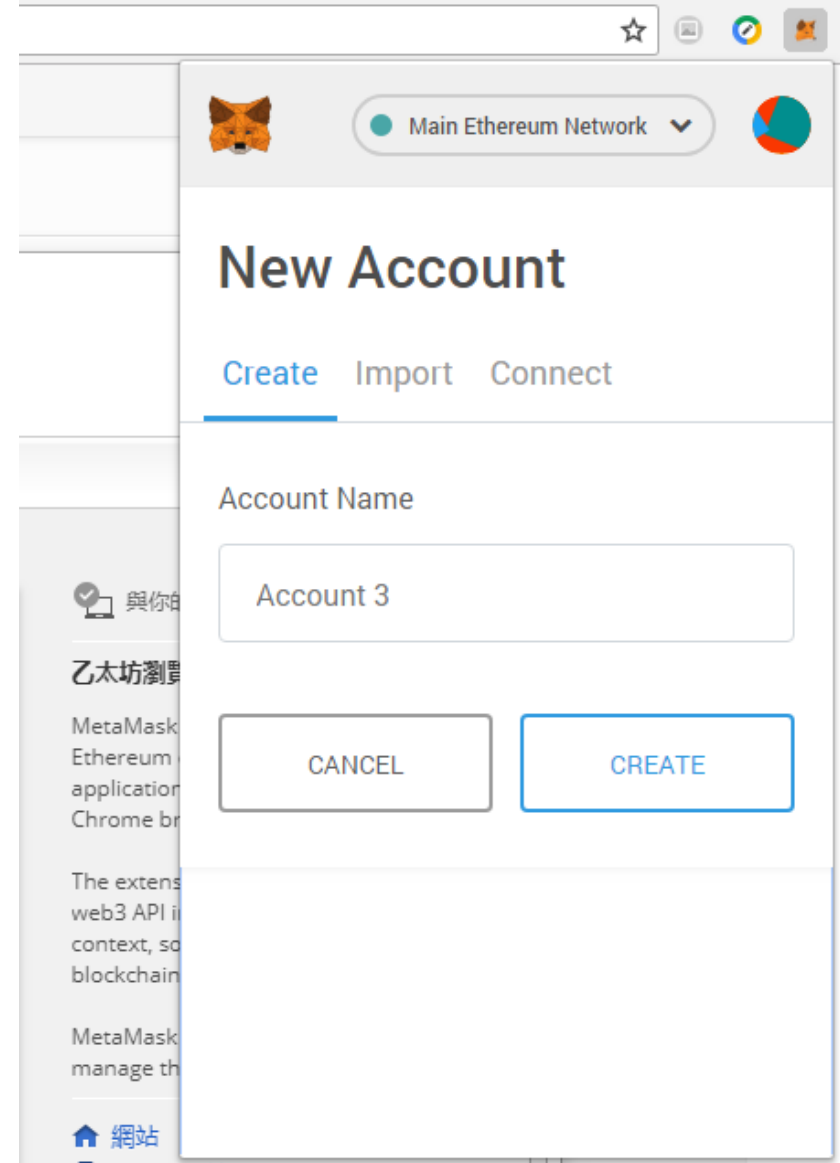

# Create an address (MetaMask) 1

- Step 1 : Open Chrome, goes to Chrome Web Store to install MetaMask
- <https://chrome.google.com/webstore/detail/metamask/nkbihfbeogaeaoehlefnkodbefgpgknn>

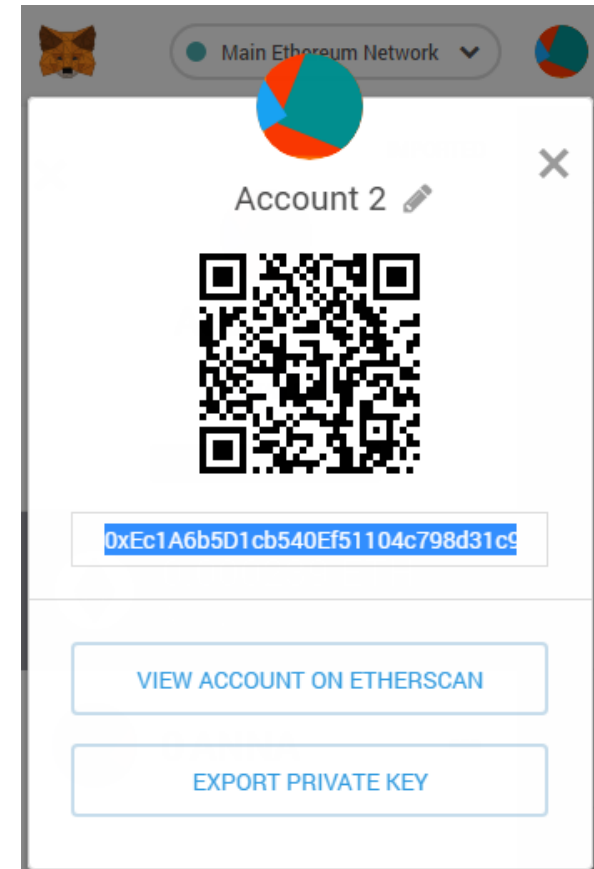

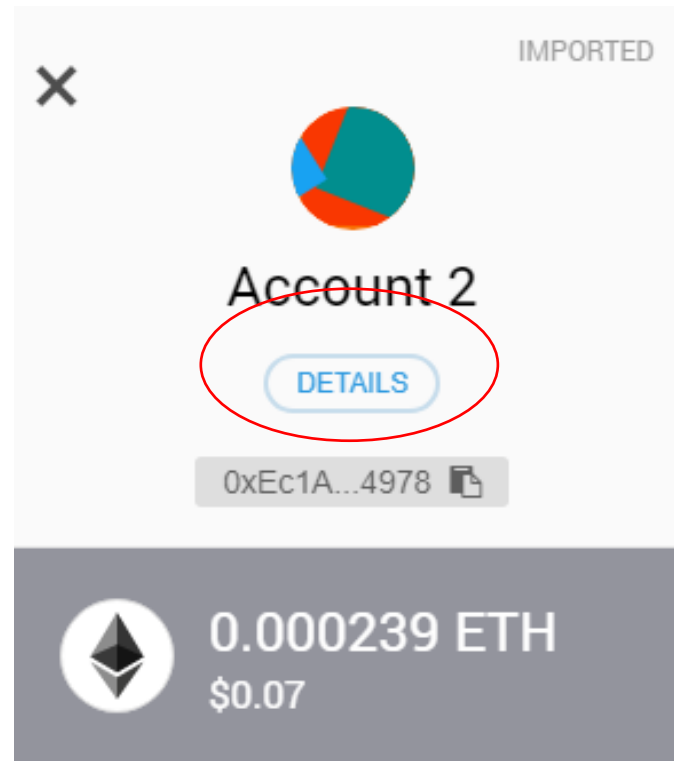

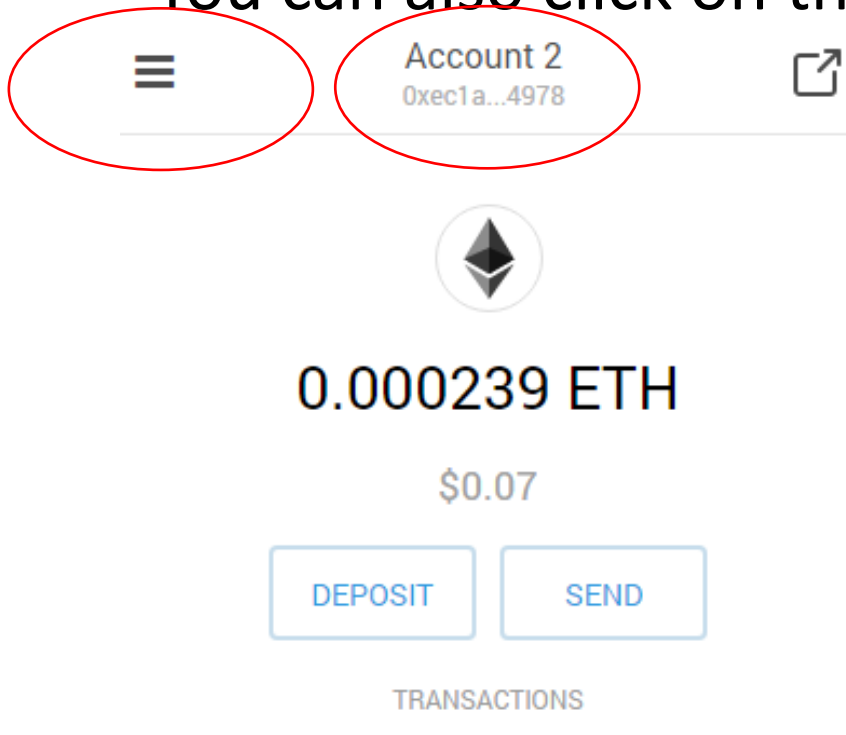

# Create an address (MetaMask) 2

- After installing, click on the Fox icon on the top right hand corner and create a wallet
- Input a strong password to encrypt the private key
- Optional : back up the 12 words recovery phrase and private key

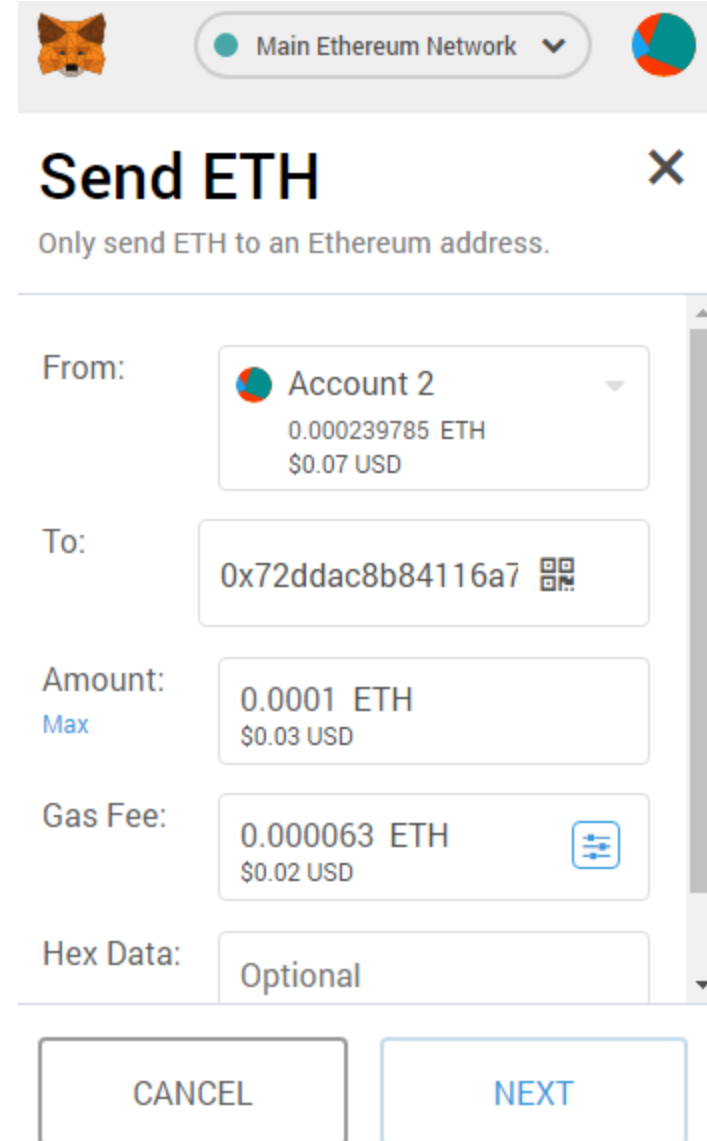

# Create an address (MetaMask) 3

- Click the Menu button → Details to get the address  
0xec1a6b5d1cb540ef51104c798d31c943d0d84978 in this case
- You can also click on the account name to copy address

# Transfer the money to ICO website (MetaMask) 1

- Important : Use the account with coins, not necessary the address just created
- Suppose payment address is  
0x80d8E8477708166E89A4DbF3A5Bec9ADce3703F6
- Click Send, input the info, leave other info default

Send ETH

Only send ETH to an Ethereum address.

From: Account 2  
0.000239785 ETH  
\$0.07 USD

To: 0x72ddac8b84116a7

Amount: 0.0001 ETH  
Max \$0.03 USD

Gas Fee: 0.000063 ETH  
\$0.02 USD

Hex Data: Optional

CANCEL NEXT

# Transfer the money to ICO website (MetaMask) 2

- Click confirm
- A transaction ID (TxHash) will be created
- You may visit etherscan to view the status
- <https://etherscan.io/address/0xec1a6b5d1cb540ef51104c798d31c943d0d84978>

< Edit Main Ethereum Network

Account 2 → Account 1

TxReceipt Status: **Success**

Block Height: [6194285](#) (8676 block confirmations)

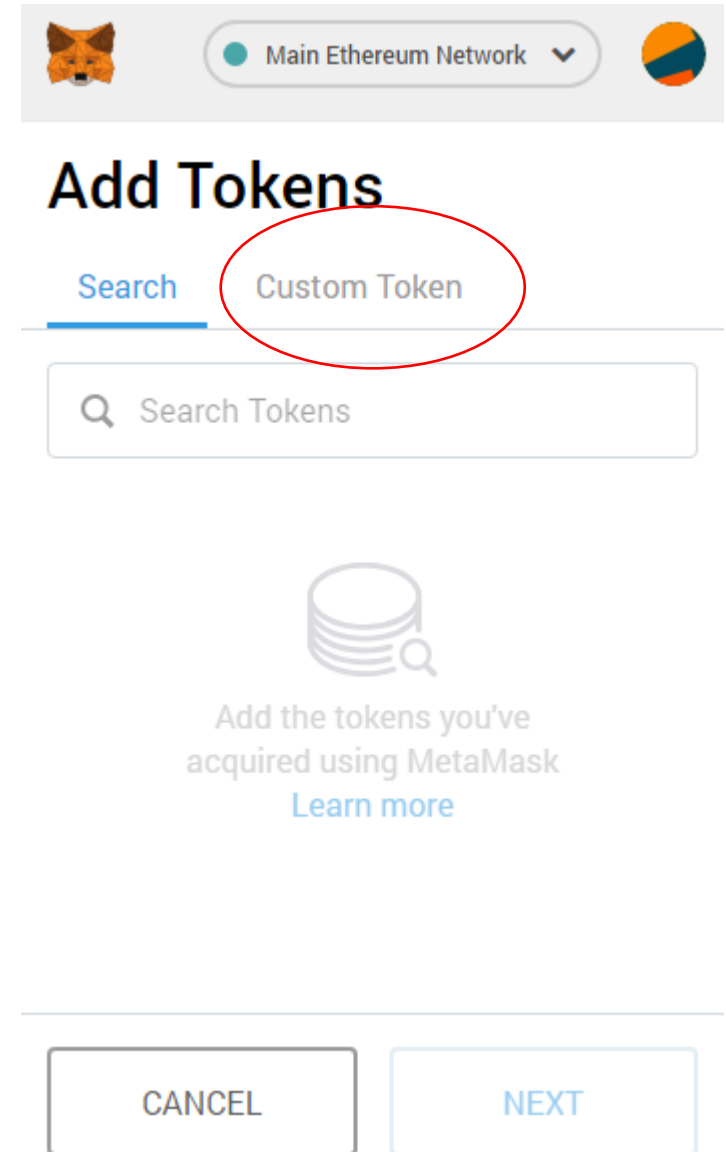

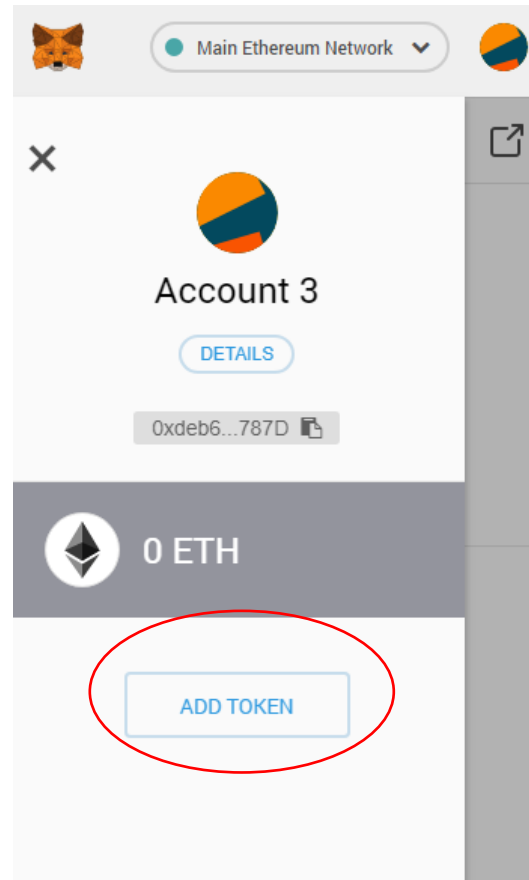

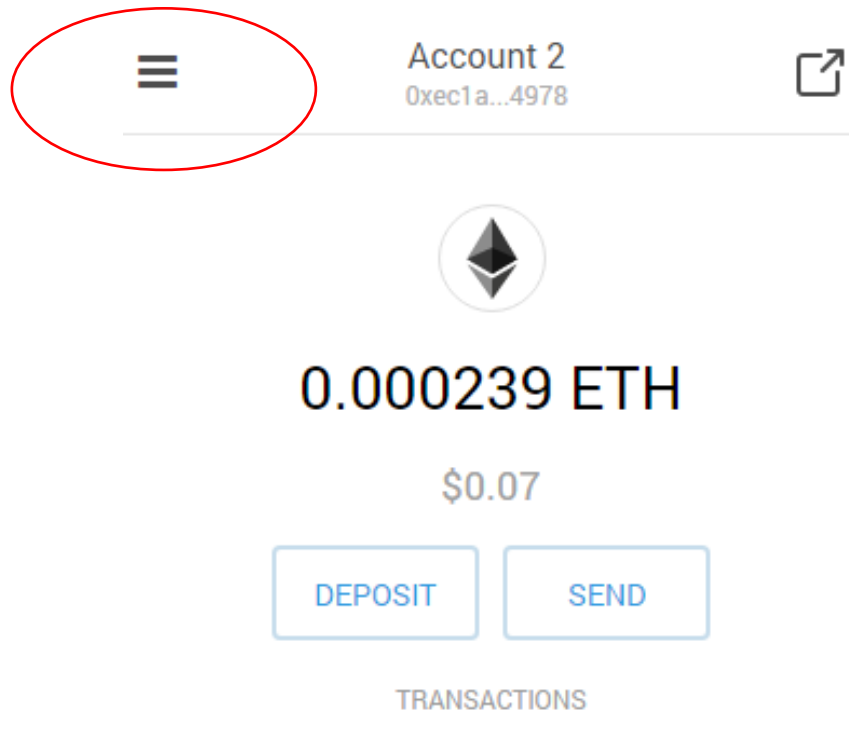

TimeStamp: 1 day 11 hrs ago (Aug-22-2018 04:26:56 PM +UTC)

# Register payment information and address on ICO website

- Provide the following information to the ICO website to register
- Transaction ID for paying the coins (TxHash)
- Your address to receive token
- Contact email
- User ID (Referral code for referring new purchasers) (if any)
- ICO website will check the payment status on etherscan.io and calculate how many token should be sent to you

# Receiving the Token (MetaMask) 1

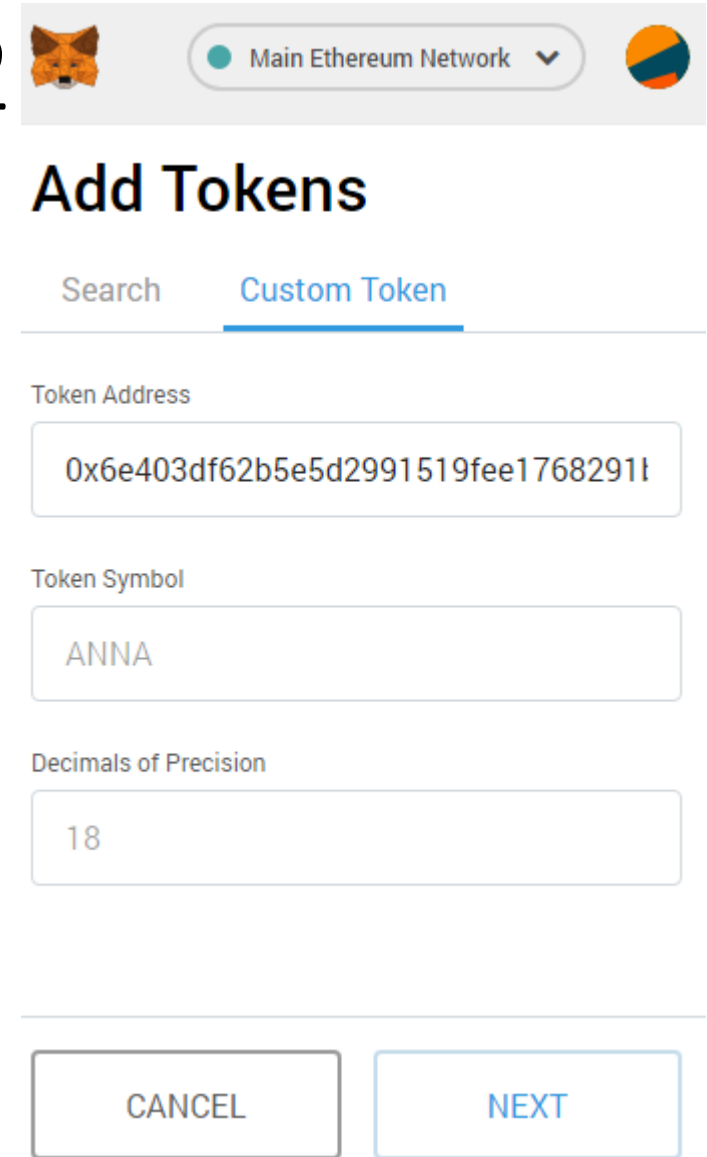

- Click Menu → Add Token → Custom Token

# Receiving the Token (MetaMask) 2

- Copy the token address to the address fields, other information can be filled automatically
- In this case,  
0x6e403df62b5e5d2991519fee1768291b1bfeeb8b
- In case it does not filled automatically, you may found the info from etherscan.io
- <https://etherscan.io/token/0x6e403df62b5e5d2991519fee1768291b1bfeeb8b>

MetaMask interface showing the 'Add Tokens' screen. The network is set to 'Main Ethereum Network'. The 'Custom Token' tab is selected. The form contains the following information:

- Token Address: 0x6e403df62b5e5d2991519fee1768291b1bfeeb8b
- Token Symbol: ANNA
- Decimals of Precision: 18

Buttons: CANCEL, NEXT

# Receiving the Token (MetaMask) 3

- Go back the Menu page, if the token is transferred, it will be shown.
- Important: If you send the token out, you need some ETH (~0.001) to pay the fee
